

CDAC MUMBAI

Lab Assignment

SECTION 1: Error-Driven Learning Assignment: Loop Errors

Instructions:

Analyze each code snippet for errors or unexpected behavior. For each snippet, determine:

1. Why does the error or unexpected behavior occur?
 2. How can the code be corrected to achieve the intended behavior?
-

Snippet 1:

```
public class InfiniteForLoop {  
    public static void main(String[] args) {  
        for (int i = 0; i < 10; i--) {  
            System.out.println(i);  
        }  
    }  
}
```

// Error to investigate: Why does this loop run infinitely? How should the loop control variable be adjusted?

Snippet 2:

```
public class IncorrectWhileCondition {  
    public static void main(String[] args) {  
        int count = 5;  
        while (count = 0) {  
            System.out.println(count);  
            count--;  
        }  
    }  
}
```

// Error to investigate: Why does the loop not execute as expected? What is the issue with the condition in the 'while' loop?

Snippet 3:

```
public class DoWhileIncorrectCondition {  
    public static void main(String[] args) {  
        int num = 0;  
        do {  
            System.out.println(num);  
            num++;  
        } while (num > 0);  
    }  
}
```

```
}  
}  
// Error to investigate: Why does the loop only execute once? What is wrong with the loop condition in the `do-while` loop?
```

Snippet 4:

```
public class OffByOneErrorForLoop {  
    public static void main(String[] args) {  
        for (int i = 1; i <= 10; i++) {  
            System.out.println(i);  
        }  
        // Expected: 10 iterations with numbers 1 to 10  
        // Actual: Prints numbers 1 to 10, but the task expected only 1 to 9  
    }  
}  
// Error to investigate: What is the issue with the loop boundaries? How should the loop be adjusted to meet the expected output?
```

Snippet 5:

```
public class WrongInitializationForLoop {  
    public static void main(String[] args) {  
        for (int i = 10; i >= 0; i++) {  
            System.out.println(i);  
        }  
    }  
}  
// Error to investigate: Why does this loop not print numbers in the expected order? What is the problem with the initialization and update statements in the `for` loop?
```

Snippet 6:

```
public class MisplacedForLoopBody {  
    public static void main(String[] args) {  
        for (int i = 0; i < 5; i++)  
            System.out.println(i);  
        System.out.println("Done");  
    }  
}  
// Error to investigate: Why does "Done" print only once, outside the loop? How should the loop body be enclosed to include all statements within the loop?
```

Snippet 7:

```
public class UninitializedWhileLoop {  
    public static void main(String[] args) {  
        int count;
```

```
        while (count < 10) {
            System.out.println(count);
            count++;
        }
    }
}
```

// Error to investigate: Why does this code produce a compilation error? What needs to be done to initialize the loop variable properly?

Snippet 8:

```
public class OffByOneDoWhileLoop {
    public static void main(String[] args) {
        int num = 1;
        do {
            System.out.println(num);
            num--;
        } while (num > 0);
    }
}
```

// Error to investigate: Why does this loop print unexpected numbers? What adjustments are needed to print the numbers from 1 to 5?

Snippet 9:

```
public class InfiniteForLoopUpdate {
    public static void main(String[] args) {
        for (int i = 0; i < 5; i += 2) {
            System.out.println(i);
        }
    }
}
```

// Error to investigate: Why does the loop print unexpected results or run infinitely? How should the loop update expression be corrected?

Snippet 10:

```
public class IncorrectWhileLoopControl {
    public static void main(String[] args) {
        int num = 10;
        while (num = 10) {
            System.out.println(num);
            num--;
        }
    }
}
```

// Error to investigate: Why does the loop execute indefinitely? What is wrong with the loop condition?

Snippet 11:

```
public class IncorrectLoopUpdate {
    public static void main(String[] args) {
        int i = 0;
        while (i < 5) {
            System.out.println(i);
            i += 2; // Error: This may cause unexpected results in output
        }
    }
}
```

// Error to investigate: What will be the output of this loop? How should the loop variable be updated to achieve the desired result?

Snippet 12:

```
public class LoopVariableScope {
    public static void main(String[] args) {
        for (int i = 0; i < 5; i++) {
            int x = i * 2;
        }
        System.out.println(x); // Error: 'x' is not accessible here
    }
}
```

// Error to investigate: Why does the variable 'x' cause a compilation error? How does scope

SECTION 2: Guess the Output

Instructions:

1. **Perform a Dry Run:** Carefully trace the execution of each code snippet manually to determine the output.
 2. **Write Down Your Observations:** Document each step of your dry run, including the values of variables at each stage of execution.
 3. **Guess the Output:** Based on your dry run, provide the expected output of the code.
 4. **Submit Your Assignment:** Provide your dry run steps along with the guessed output for each code snippet.
-

Snippet 1:

```
public class NestedLoopOutput {
    public static void main(String[] args) {
        for (int i = 1; i <= 3; i++) {
            for (int j = 1; j <= 2; j++) {
                System.out.print(i + " " + j + " ");
            }
            System.out.println();
        }
    }
}
```

```
    }  
  }  
}  
// Guess the output of this nested loop.
```

Snippet 2:

```
public class DecrementingLoop {  
    public static void main(String[] args) {  
        int total = 0;  
        for (int i = 5; i > 0; i--) {  
            total += i;  
            if (i == 3) continue;  
            total -= 1;  
        }  
        System.out.println(total);  
    }  
}  
// Guess the output of this loop.
```

Snippet 3:

```
public class WhileLoopBreak {  
    public static void main(String[] args) {  
        int count = 0;  
        while (count < 5) {  
            System.out.print(count + " ");  
            count++;  
            if (count == 3) break;  
        }  
        System.out.println(count);  
    }  
}  
// Guess the output of this while loop.
```

Snippet 4:

```
public class DoWhileLoop {  
    public static void main(String[] args) {  
        int i = 1;  
        do {  
            System.out.print(i + " ");  
            i++;  
        } while (i < 5);  
        System.out.println(i);  
    }  
}  
// Guess the output of this do-while loop.
```

Snippet 5:

```
public class ConditionalLoopOutput {
    public static void main(String[] args) {
        int num = 1;
        for (int i = 1; i <= 4; i++) {
            if (i % 2 == 0) {
                num += i;
            } else {
                num -= i;
            }
        }
        System.out.println(num);
    }
}
// Guess the output of this loop.
```

Snippet 6:

```
public class IncrementDecrement {
    public static void main(String[] args) {
        int x = 5;
        int y = ++x - x-- + --x + x++;
        System.out.println(y);
    }
}
// Guess the output of this code snippet.
```

Snippet 7:

```
public class NestedIncrement {
    public static void main(String[] args) {
        int a = 10;
        int b = 5;
        int result = ++a * b-- - --a + b++;
        System.out.println(result);
    }
}
// Guess the output of this code snippet.
```

Snippet 8:

```
public class LoopIncrement {
    public static void main(String[] args) {
        int count = 0;
        for (int i = 0; i < 4; i++) {
            count += i++ - ++i;
        }
        System.out.println(count);
    }
}
```

```
}  
// Guess the output of this code snippet.
```

SECTION 3: Lamborghini Exercise:

Instructions:

1. **Complete Each Program:** Write a Java program for each of the tasks listed below.
 2. **Test Your Code:** Make sure your code runs correctly and produces the expected output.
 3. **Submit Your Solutions:** Provide the complete code for each task along with sample output.
-

Tasks:

1. Write a program to calculate the sum of the first 50 natural numbers.
2. Write a program to compute the factorial of the number 10.
3. Write a program to print all multiples of 7 between 1 and 100.
4. Write a program to reverse the digits of the number 1234. The output should be 4321.
5. Write a program to print the Fibonacci sequence up to the number 21.
6. Write a program to find and print the first 5 prime numbers.
7. Write a program to calculate the sum of the digits of the number 9876. The output should be 30 (9 + 8 + 7 + 6).
8. Write a program to count down from 10 to 0, printing each number.
9. Write a program to find and print the largest digit in the number 4825.
10. Write a program to print all even numbers between 1 and 50.
11. Write a Java program to demonstrate the use of both pre-increment and post-decrement operators in a single expression
12. Write a program to draw the following pattern:

```
*****  
*****  
*****  
*****  
*****
```

13. Write a program to print the following pattern:

```
1  
2*2  
3*3*3  
4*4*4*4  
5*5*5*5*5  
5*5*5*5*5  
4*4*4*4  
3*3*3  
2*2
```

14. Write a program to print the following pattern:

```
*
**
***
****
*****
*****
*****
```

15. Write a program to print the following pattern:

```

*
**
***
****
*****
```

16. Write a program to print the following pattern:

```

*
**
***
****
*****
*****
```

17. Write a program to print the following pattern:

```
*****
****
***
**
*
```

18. Write a program to print the following pattern:

```

*
**
***
****
*****
*****
***
*
```

19. Write a program to print the following pattern:

```
1
1*2
1*2*3
1*2*3*4
1*2*3*4*5
```

20. Write a program to print the following pattern:

```
5
5*4
5*4*3
5*4*3*2
5*4*3*2*1
```

21. Write a program to print the following pattern:

```
1
1*3
1*3*5
1*3*5*7
1*3*5*7*9
```

22. Write a program to print the following pattern:

```
*****
*****
*****
***
*
***
*****
*****
*****
```

23. Write a program to print the following pattern:

```
11111
22222
33333
44444
55555
```

24. Write a program to print the following pattern:

```
1
22
333
4444
55555
```

25. Write a program to print the following pattern:

```
1
12
123
1234
12345
```

26. Write a program to print the following pattern:

1
2 3
4 5 6
7 8 9 10
11 12 13 14 15
